Bob Whitson
Senior VP and GM of Embedded Storage Products

Randall Wick
VP and General Counsel

OVERVIEW

Emulex Corporation (NYSE:ELX) is a global provider of enterprise-class solutions and technologies that intelligently connect storage, servers and networks, to ensure access to data that's open, secure and adaptable. Emulex is a leader and catalyst for innovation and investment protection with a proven record of success that spans 30 years. The world's leading OEMs rely on Emulex products to build scalable, high-performance storage and server solutions for today's largest, most demanding data centers. At Emulex, we envision a world in which all stored data is networked.

TECHNOLOGY AND PRODUCTS

As the server and storage industries evolve toward a fully-networked data center model, Emulex stands at the forefront, developing innovative, enterprise-class solutions that enable and accelerate this technological evolution. Our market-focused strategy involves satisfying the needs of three important, industry-transforming segments: *blade servers, data center virtualization and intelligent, multi-protocol storage networking.*

Product categories include:

Host Server Products

Emulex is the preferred partner and supplier to the world's top-tier OEMs. Today, more than 95 percent of the Fortune 100 trust their storage connectivity needs to Emulex Fibre Channel HBAs and I/O controllers. Emulex's industry-leading LightPulse® HBAs are integrated by the world's leading server and storage suppliers. Emulex-enabled advancements in next generation Fibre Channel and multi-protocol architectures, such as Fibre Channel over Ethernet, position us for continued leadership in storage and server networking.

Embedded Storage Products

Emulex offers the world's most complete portfolio of integrated, embedded storage networking products, giving customers a complete, end-to-end solution set for enterprise storage systems. As the first company to integrate support for the three standard serial storage protocols, including Fibre Channel, SAS and SATA, within a single embedded device, Emulex is uniquely positioned to lead and support the future of tiered network storage.

RESEARCH AND DEVELOPMENT

Emulex invests a significant amount of resources in developing industry-leading solutions to ensure that the company continues to achieve a time-to-market advantage over the competition. Emulex maintains state-of-the-art development centers in Bangalore, India and the following US locations: Bolton, MA; Bothell, WA; Costa Mesa, CA; Longmont, CO; Roseville, CA; and San Jose, CA.

FINANCIALS**Record-Setting Growth**

Record-setting successes in design wins, revenue growth and industry partnerships, indicate that Emulex and its products are enjoying widespread market acceptance. In Fiscal Year 2008, annual revenue exceeded \$488 million. This milestone represents ten consecutive years of revenue growth, an unprecedented achievement in the storage networking industry.

Strong Balance Sheet

The Company's balance sheet also remained very strong, as it exited fiscal 2008 with over \$350 million in net cash.
